Expert in reverse engine and malware intelligence  
2021-2021 - University of Malaga

Cybersecurity master  
2020-2021 - Valencian International University

Web Application Development  
2017-2019 - High School Severo Ochoa

Microcomputer systems and networks  
2015-2017 - High School Severo Ochoa

### Professional Experience

#### Software developer

2018 - Present

4 years of personal and autonomous development. Knowledge in more than 35 technologies, languages and frameworks. Good practices, use of interfaces, classes, enums, etc.. Knowledge in **git, jira, SOLID principles, hexagonal architecture**. Habituated to do **sprints** and follow the **Scrum** process. Fullstack develop with **MERN stack** tendency. Passionate about find bugs and optimize everything. I have do the entire develop of +10 websites and writed a lot of scripts and bots. Facility with **requests manage, sessions, JSONs, sockets, async functions and multithreading**. I have analyzed malware and i know obfuscation techniques

#### Frontend developer and bug fixer

2022 - 2022, NTT DATA - Jazztel

Develop and maintenance of the Jazztel's Website with **Angular and NodeJS**. Diary and weekly coordinance with some teams and direct interlocation with the client. Diary use of **Jenkins, Jira and Git**. In addition, i was mandated to find and solve bugs in the testing servers.

#### Frontend developer

2020 - 2020, MBVR

I was head of frontend development for a startup related to security against Covid-19. Development started with **C# and Blazor** but we ended up migrating to **C# and React (Redux + SemanticUI)**. Weekly meetings with the back team. I was also in charge of adding security to the network and to the intraconnections (**JWT, encryption, etc.**).

#### RPA software developer

2019 - 2019, Accenture - Movistar

Development and improvement of Movistar's internal software. Use of **Blueprism** to automate the processes carried out by the customer service team and in stores. I improved some of these softwares by performing **web scrapping** with the use of **HTTP requests** and thus optimizing the execution speed x5.
